1 The block diagram of the complete target lifter system

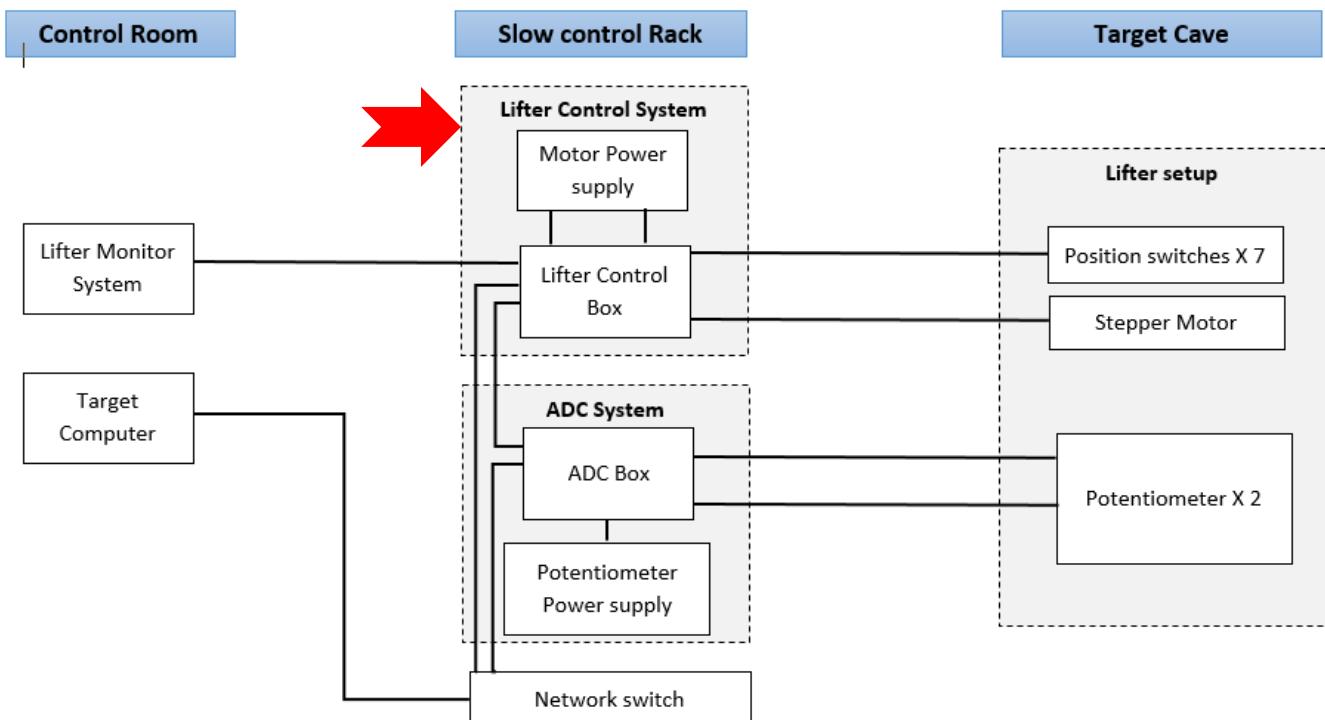

Figure 1 : The block diagram of the target lifter system

This ORC document discusses the lifter control system on the slow control rack

2 Lifter control system

The lifter control system consists of the motor control and power source electronics for the lifter setup. The setup is planned to place on the slow control rack.

3 The tasks of the Lifter control system

- Supply power and the control signals to the stepper motor of the target lifter system
- Connect the position switches of the lifter with the motor controller
- Send the status of the position switches to the lifter monitor system which is placed in the control room
- Power cycle the motor controller when required. The power cycle command will issue from the control room.

4 The components of the system

Table 1 : The components of the lifter control system

Qty	Item	Model
1	Moto controller	Applied Motion, STF-03D
1	Regenerating clamp	Applied Motion, RC880
2	4-Channel relay module	LIVISN, B07Z38SS6T
1	12V/110V relay	Omron Automation, G2R-1-T DC12
1	+/- 12 V Power Supply	Cosel USA, Inc., PBW15F-12-N
